The invention relates to an isolated polynucleotide (I) encoding a colopypeptide (II) comprising a portion of a colon tumour protein. A new colsymbotide (III) that hybridises to (I) is useful for determining the presence of a cancer in a patient. (II) or antigen presenting calls specific for a tumour protein, by contacting T cells capacific for a tumour protein, by contacting T cells or antigen presenting cells that express (II). (II). (II) or antigen presenting cells that express (II) are useful for treating colon cancer in a patient by incubating CD4 and/or CD8+ T cells isolated from a patient with (I), (II), or antigen presenting cells that express (II), so that T cells proliferate, and administering to the patient and cffective amount of the proliferated T cells, thus inhibiting the cavelopment of a cancer in the patient. A new composition is useful in stimulating an immune response in a patient. (I) or (II) is useful in colon cancer and for the diagnosis and monitoring of the cancers (I), (II) or an antibody against (II) is useful as a probe or primer for or therapy of human colon cancer. (I) is useful as a probe or primer for molecic acid hybridisation, and in the design and preparation of tibozyme colon cancer of the proliferate design and preparation of tibozyme colon cancer of the substitution of (II) in tumour cells ABK29475.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The specification describes a method for the intracellular analysis of a target molecule within a biological cell. The method comprises expressing within the cell a first polypeptide sequence comprised of a first reporter species capable of binding to the target molecule and a first reporter molety attached to the first binding species; expressing within the cell as second polypeptide sequence comprised of a second binding species capable of competing with the target molecule for binding species capable of competing with the target molecule for binding species capable of competing with the target molecule for binding of the first binding of competing with the target molecule for binding of the first binding species and a second reporter moieties binding species the first and second reporter moleties binding a signal that can be differentiated from one capable of being generated when the first and second reporter moieties do not interact; and effecting a measurement to determine the presence capable of being generated when the first and second reporter moieties do not interact; and effecting a measurement to determine the presence or signal representative of binding of the first and second binding species. The method is useful for the intracellular analysis of a target molecule, e.g. for detecting the presence and/or amount of target contractions of intracellular molecules. The present sequence represents interactions of intracellular molecules. The present sequence represents a plasmid used in an intracellular assay for the MUCI epitope of human mucinl, demonstrating the method of the invention. In this assay,

The method comprises expressing within the cell a first polypeptide sequence comprised of a first binding
                                                                                                                                                                                                                                                                                     9
the first polypeptide is an anti-MUC1 ScFv, and the second polypeptide comprises the MUC1 epitope attached to yellow fluorescent protein.
                                                                                                                                                                                                                                                                                                                                                                                                          TCCTGCACTGGAACCAGCGATGACGTTGGTGGTTATAACTATGTCTCCTGGTACCAACAC

moiety attached to the first binding species; expressing within the cell
moiety attached to the first binding species; expressing within the cell
capable of competing with the target molecule for binding species
capable of competing with the target molecule for binding species
competing with the target molecule for binding species capable
cof competing with the target molecule for binding species capable
cof competing with the target molecule for binding species
cof species and a second reporter moiety, the first and second reporter
moieties being such that on binding together of the first binding
be capable of producing a signal that can be differentiated from one
capable of baing generated when the first and second reporter moieties
con interact; and effecting a measurement to determine the presence
cor signal representative of binding of the first and second binding
concluse; The method is useful for the intracellular analysis of a target
molecules in cells. The method is also useful for studying the
conclusions of intracellular molecules. The present sequence represents
content in the mointracellular assay for the MUCI epitope of
chuman mucini, demonstrating the method of the invention. In this assay,
the first polypeptide is an anti-wood computation protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       4484
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       4365 recrecaeredaaecaaecageaeregregreararaaerarereceregraceaeae 4424

The invention relates to a novel antibody or its fragment, which immunospecifically binds tumour necrosis factor Delta (TNF-delta/APRIL). The antibody of the invention has dermaclogical, immunosuppressive, antiantabedy of the invention has dermaclogical, immunosuppressive, antialtametory, antitheumatic, antiarthritic cytostatic, antianamic, antialta, ant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             454 recrecacresaaccascastaacsrrssistaraacratsrerecessas 513

fragment. The fragment is used to produce a mixture or panel of 5
different specific binding members, each comprising an antibody VH
and/or VL variable domain and capable, when displayed on the surface
of filamentous bacteriophage particles or in the case of a specific
binding member comprising the DS VH and/or VL variable domain when
bound to human serum amyloid protein, to pass through a mammalian
blood brain barrier (BBB). The panel is useful for the selection of
specific binding members with a desired property such as ability to bind endothelial cells or other brain cell antigen,
ability to bind areas of inflammation in the brain or BBB breakdown or
ability to bind intracellular adhesion molecules and to bind transferrin
receptor. The antibodies are useful in diagnosis, prophylaxis and
treatment of human or animal body, including neurological diseases, such

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence encodes an antibody variable light chain (VL) fragment. The fragment is used to produce a mixture or panel of 5 different specific binding members, each comprising an antibody VH and/or VL variable domain and capable, when displayed on the surface of filamentous bacteriophage particles or in the case of a specific binding member comprising the D5 VH and/or VL variable domain when bound to human serum amyloid protein, to pass through a mammalian blood brain barrier (BBB). The panel is useful for the selection of specific binding members with a desired property such as ability to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Nucleotide sequence of variable light chain fragment of clone G102
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   chain; VL; amyloid protein; blood brain barrier;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cross BBB, ability to bind endothelial cells or other brain cell antigen, ability to bind areas of inflammation in the brain or BBB breakdown or ability to bind intracellular adhesion molecules and to bind transferrin receptor. The antibodies are useful in diagnosis, prophylaxis and treatment of human or animal body, including neurological diseases, such as Alzarienter's disease, prion disease, NISS-related dementia, epilepsy and traumatic brain injury and any diseases involving inflammation occurring within the brain or central nervous system.

This invention describes a novel fusion protein (I) that has, at its N-terminus, one or more epitopes that bind specifically to autoantibodies (AAb) against the islet cell antigen IA2 and, at its C-terminus, one or more epitopes that bind specifically to antibodies (Ab) directed against the glutamate decarboxylase GAD65. (I), also nucleic acid (II) encoding the year containing (II) and transformed cells, are useful for diagnosis and prognosis of diabetes mellitus type 1, stiff-man syndrome, polyglandular autoimmune syndrome or other autoimmune conditions of diagnosis of high specificity and sensitivity, capable of recognizing antibodies against both IA2 and GAD65, simultaneously. Unlike known tusions, where the GAD65 component is at the N-terminus, (II) contains correctly folded conformational epitopes that can react with most MICA autoantibodies. This sequence encodes the human autoantibody MICA-I variable region heavy chain used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         209

The present sequence encodes a recombinant human antibody scFv. Antibody TN11 reacts with the long form of human Tenascin-C (TN-C). The epitope recognised by TN11 is located inside domain C of TN-C. TN11 is therefore only capable of recognising TN-C isoforms containing domain C (CTN-C). TN11 is useful for detecting the presence of TN-C isoforms in vitro or in vivo for diagnosing pathologies expressing the cTN-C isoforms of TN-C. It is useful for the preparation of formulations for the treatment of

```
The invention describes a modified virus comprising non-native polypeptides which has framework moieties each containing binding polypeptides which has altered tropism conferrad by the binding moieties, where the virus has altered tropism and nucleus of mammalian host cell in conformation which is maintained in absence of ligands for the binding moieties, where the conformation allows the binding moiety subsequently to bind with the ligand. The modified virus is useful in therapy for the preparation of a medicament for treating tumnour cells, cancer, proliferating cells, vascular diseases.

Inflammatory diseases and infectious diseases such as Human immunodeficiency virus (HIV). The altered tropisms allow the virus to be used in treatment of disease in human or animal subjects, either by in vivo treatment of, or ex vivo treatment of cells of, the subject requiring treatment. The problems associated with the expression of functional non-native viral components in the nucleus and cytosol of host cells is solved by using the modified virus for the purpose. This fragment (FV) used in the creation of the modified virus containing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           non-native polypeptides.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a new isolated nucleic acid termed ovarian specific nucleic acid (OSNA) comprising: (a) a nucleic acid molecule that encodes any of 53 fully defined protein sequences appearing as ABUG1018-ABUG1070 (termed ovarian specific proteins, OSP); (b) any of 76 fully defined nucleotide sequences appearing as ABX92187-ABX92262; or (c) a sequence having at least 60% sequence identity to the nucleic acid molecule of (a) or (b). Also included are a method for determining the presence of an ovary specific nucleic acid (OSNA) in a sample, a vector comprising an OSNA, a host cell comprising the vector, an isolated OSP polypeptic an anti-OSP antibody or fragment, an enthod for determining the presence of an ovary specific protein in a sample and a vaccine comprising an OSP or OSNA. The methods and compositions of the present invention are useful for identifying.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              180

The invention relates to a new modified single chain Fv antibody
containing at least two Heavy chain variable domains and at least two
light chain variable domains from the same or different monoclonal
antibodies and which is an agonie for crosslinking a molecule at the
cell surface or within the cell and thereby transducing a signal into the
cell. Also include are the DNA encoding the antibody, animal cells and
microorganisms transformed by and expressing the DNA; the preparation of
the antibodies by culture of the transformed cells, drug compositions
containing the antibodies and an assay method for the agonist activity
of the antibodies by contacting the antibodies with cells expressing the
relevant cell surface or internal molecule. The antibodies are useful for
treatment and prevention of cancer, inflammatcry disease, hormonal
disorders including diabetes, autoimmune disease, leukaemia,
disordering an antibody of the invention or a fragment thereof.

                    antibody, and exhibits thrombopoietin (TPO) agonistic effect by causing the TPO receptor to crosslink. The antibodies are useful in preventives and/or remedies for platelet reduction-associated blood diseases, thrombocytopenia following cancer chemotherapy or leukaemia. The antibody can act as a TPO signal transduction agonist by transducing a signal into cells by crosslinking a TPO receptor to exert TPO agonism. This sequence encodes a thrombopoietin (TPO) agonist antibody associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               608 AATCGCTTCTCTGGCTCCAAGTCTGGCAACACGGCCTCCCTGACCATCTCTGGGCTCCAG

                                                                                                                                                                                                                                                  The invention relates to a new modified single chain Fv antibody containing at least two Heavy chain variable domains and at least two Light chain variable domains and at least two Light chain variable domains from the same or different monoclonal antibodies and which is an agonist for crosslinking a molecule at the cell surface or within the cell and thereby transducing a signal into the cell surface or within the cell and thereby transducing a signal into the cell surface or within the cell and expressing the publy, animal cells and microorganisms transformed by and expressing the preparation of the antibodies by culture of the transformed cells, drug compositions containing the antibodies by contacting the antibodies with cells expressing the relevant cell surface or internal molecule. The antibodies are useful for treatment and prevention of cancer, inflammatory disease, hormonal disorders including diabetes autoimmune disease, leukaemia dysendocrinism and blood disorders. The present sequence is a DNA sequence encoding an antibody of the invention or a fragment thereof.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            697
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   244 GCIGAGGACGAGGCTGATTATTACTGTTCATATACAACCAGTAGCACTTTGTTATTC 303
                                                The invention describes a modified antibody comprising at least 2 heavy chain variable domains and 2 or more light chain variable domains of an antibody, and exhibits thrombopoletin (TPO) agonistic effect by causing the TPO receptor to crosslink. The antibodies are useful in preventives and/or remedies for platelet reduction-associated blood diseases, thrombocytopenia following cancer chemotherapy or leukaemia. The antibody can act as a TPO signal transduction agonist by transducing a signal into cells by crosslinking a TPO receptor to exert TPO agonism. This sequence encodes a thrombopoietin (TPO) agonist antibody associated

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 1,

Patent No. 601138
GENERALI INFORMATION:
APPLICANT: REFF, Witchell E.
APPLICANT: KLOETZER, William S.
APPLICANT: MAKAWIRA, Takehiko
TITLE OF INVENTION: GAMMA-1 ANTI-HUMAN CD23 MONOCLONAL
TITLE OF INVENTION: ANTIBODIES AND USE THEREOF AS THERAPEUTICS
NUMBER OF SEQUENCES: 35
CORRESPONDENCE ADDRESS:
ADDRESSEE: BURNS, DOANE, SWECKER & MATHIS
STREET: P.O. BOX 1404
CITY: Alexandria
STRTE: VIrginia

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                           333
